

Upskill & advance
your career

EPICS is a cutting-edge learning program launched by BOMA Enspire that uses 3D/VR/Digital Twin technology to replicate real-world operational and retrofit scenarios.

This pilot project is free and open to building operators, young professionals, and those interested in a career in building operations. Each interactive module offers experiential learning in the BOMA Enspire Immersive Media Room.

**Canada's cleantech sector is growing and jobs are changing.
Upskill your career and be future-ready.**

Experiential learning for building operators and retrofit talent pools

Connecting learning to real-life application.

Information is presented in an interactive touch-wall format with pop-out multimedia content playing on separate screens.

Each EPICS session includes an Overview Module, an Experiential Learning Module, and a Participant Driven Interactive Module with workforce development.

Registration is currently open for four learning streams

Two hour workshops. Content delivered through 30-minute modules.

1. EBCx

- Examines common EBCx measures and best practices.
- Provides an overview of the Natural Resources Canada (NRCan) Existing Building Commissioning (EBCx) Framework, tailored for building operators and managers.
- **Learning outcomes: advance sustainable building operations to achieve energy efficiencies and reduce GHG emissions.**

2. Retrofit Planning

- Through real-world case studies, interactive digital twins, and VR simulations, participants will learn about retrofit planning designed for building operators and managers.
- **Learning outcomes: focus on advancing sustainable building retrofits to achieve significant energy efficiencies and reduce greenhouse gas emissions.**

3. Building Operations

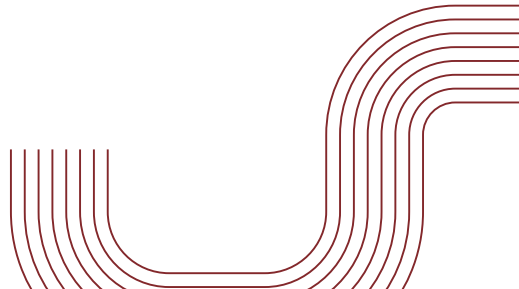

- Examines common EBCx measures and best practices.
- Provides an overview of the Natural Resources Canada (NRCan) Existing Building Commissioning (EBCx) Framework, tailored for building operators and managers.
- **Learning outcomes: advance sustainable building operations to achieve energy efficiencies and reduce GHG emissions.**

4. The Skilled Trades Apprentice's Electrician

- provides a tailored overview of the TCBN Apprentice Journey Framework for building operators and managers.
- The workshop includes a foundational overview of the skilled trades framework, its core tenants, and the value proposition for careers in low-cost, low-carbon energy savings.
- A real-world case study is used to illustrate these concepts.
- **Learning outcomes: aim to advance sustainable building operations, leading to energy efficiencies and reduced GHG emissions.**

Custom solutions for mid-tier buildings

Mid-sized buildings play an integral role in Canada's commercial real estate and carbon reduction goals, but many owners and managers face challenges upgrading aging systems for better performance.

BOMA Enspire helps remove those barriers through three distinct streams:

Targeted Financial Support to help eligible buildings plan and implement efficiency upgrades and deep retrofit projects

Free Education and Subsidized certifications to build the skills and manage retrofit projects with confidence

Resources guides and case studies to help participants make informed decisions to move projects forward.

Enspire your retrofit journey.
Lead with impact. Invest with confidence
